

```
public abstract Class ListCreatorVisitor{

    public void visitListCreator();
}

public Interface ListCreator{

    public void accept(ListCreatorVisitor visitor);
    public void composeList();
}

public class ListController extends ListCreatorVisitor{

    public void createList(ListCreator list){
        list.accept(this);
    }
}

public class ReservationList implements ListCreator{

    @Override
    public void accept(ListCreatorVisitor visitor){

        visitor.visitListCreator(this);
    }

    @Override
    public void composeList(){

        //code that compose the list in the correct way
    }
}
```
